

Appellants: Altweis et al.  
Serial No.: 09/654,858  
Filing Date: September 5, 2000  
Docket No.: ZIL-314

**Amendments to the Claims:**

This listing of claims replaces all prior versions and listings of claims in the application.

**Listing of Claims**

1. (previously presented): An improved system for electronic data sales and distribution over wide area computer networks, said networks comprising a network conduit, at least one e-commerce server computer in communication with said network conduit, and at least one customer terminal computer in communication with said network conduit, each said computer comprising input device, display device, processing device, storage device and device for communicating with said network conduit, the system comprising:

an e-commerce site for presenting e-commerce functions to each said customer in communication with said e-commerce server computer via said network conduit;

a licensing module for giving each said customer terminal computer permission to download a program module to said customer terminal computer, said licensing module consisting of an executable software application being executed on each said customer terminal computer engaged in the improved system; and

a program download site for providing a program module for downloading to each said customer terminal computer responsive to a user request.

2. (previously presented): The system of Claim 1, wherein said e-commerce site comprises an executable software application being executed by said processing device of said ecommerce server computer and said program download site comprises an executable software application being executed by a processing

Serial No.: 09/654,858  
Filing Date: September 5, 2000  
Docket No.: ZIL-314

device in a program module server computer, said e-commerce server computer and said program module server computer being distinct from one another.

3. (previously presented): The system of Claim 2, wherein said e-commerce site further provides each said customer terminal computer with the ability to download said licensing module.

4. (original): The system of Claim 3, further comprising a supplier terminal computer in local area network communication with said program module server computer.

5. (previously presented): The system of Claim 3, wherein said program module is responsive to output from said licensing module, said program module and said licensing module each comprising executable software applications, wherein output from said licensing module is input to said program module when said program module and said licensing module are executed on the processing device of a single computer.

Claims 6 – 9 (canceled)

10. (previously presented) An improved system for software distribution over wide area computer networks, said networks comprising a network conduit, at least one e-commerce server computer in communication with said network conduit, at least one customer terminal computer in communication with said network conduit, and at least one supplier server computer in communication with said network conduit, each said computer comprising at least one programmable computer comprising input device, display device, processing device, storage device and device for communicating with said network conduit, the system comprising:

Serial No.: 09/654,858  
Filing Date: September 5, 2000  
Docket No.: ZIL-314

an e-commerce site for distributing licensing modules to each said customer terminal computer via said network conduit; and

a program download site for distributing program modules to each said customer terminal computer via said network conduit

wherein said licensing modules and said program modules each comprise executable software applications for execution on programmable computers, one said licensing module cooperating with one said program module to function as a whole software application, said distribution of one said program module is responsive to the prior execution of one said licensing module on one said customer terminal computer.

11. (previously presented) The system of Claim 10, wherein said e-commerce site comprises an executable software application being executed on said e-commerce server computer.

12. (previously presented) The system of Claim 11, wherein said program download site comprises an executable software application being executed on said supplier server computer.

Claims 13 – 14 (canceled)

15. (previously presented) The system of Claim 10, wherein each said distribution of one said program module commences automatically in response to user input to said executed licensing module through said input device of said customer terminal computer.

16. (original) The system of Claim 15, wherein the execution of said program module defines a licensed condition and an unlicensed condition; said program

Serial No.: 09/654,858  
Filing Date: September 5, 2000  
Docket No.: ZIL-314

module executes in said licensed or unlicensed condition responsive to output from said licensing module.

17. (original) The system of Claim 16, wherein execution of said program module in said unlicensed condition is permitted for a pre-defined period of time, whereby expiration of said pre-defined period of time will prevent said program module from further execution.

18. (previously presented) A method of distributing a software product, via distributors, to users, over a computer network comprising:

configuring the software product as a program module and a licensing module wherein both the program module and the licensing module are required in order to operate the software product, the licensing module comprising a portion of the software product that is customized for a distributor or a group of distributors and the program module consisting of a portion of the software product that is not customized for the distributor or group of distributors, the program module comprising executable software code,

storing the configured licensing module at a first software distribution point so that it may be downloaded by a user, and

storing the program module at a location other than the first software distribution point.

19. (previously presented) The method of claim 18 wherein, subsequent to downloading the licensing module and if certain predetermined conditions are met, the user may download the program module.

20. (previously presented) The method of claim 19 wherein one of the predetermined conditions is payment or promise of payment for the software product.

Appellants: Altweis et al.  
Serial No.: 09/654,858  
Filing Date: September 5, 2000  
Docket No.: ZIL-314

21. (previously presented) The method of claim 19 wherein one of the predetermined conditions is that the user register the software product.

22. (previously presented) The method of claim 18 further comprising updating the software product by modifying the program module but not modifying the licensing module.

23. (previously presented) The method of claim 19 wherein subsequent to downloading the licensing module the user may run the licensing module.

24. (previously presented) The method of claim 23 wherein running the licensing module automatically downloads the program module.

25. (previously presented) The method of claim 23 wherein the user may run the licensing module only within a predetermined time period after downloading the licensing module.

Claim 26 (canceled).
